

Mr. Panyakorn Khaiwchoo

Computer Engineering and IoT System

Education

Rajamangala University of Technology Krungthep (RMUTK)
4th Year 2570
Bachelor's Degree
Computer Engineering and IoT System
Field of Study Engineering
GPA: 2.95

Projects & Experience

Mackerel Distribution Prediction System in the Upper Gulf of Thailand Using Artificial Intelligence (2026 – Present)

- Developed an Artificial Intelligence (AI) model using Python to process statistical data and predict mackerel distribution and catch volume
- Developed a system for collecting and analyzing mackerel catch data integrated with marine environmental data
- Designed Data Preprocessing and Data Integration processes by combining catch volume, fishing gear, Sea Surface Temperature (SST), Chlorophyll-a, Rainfall, and Wind Speed to create datasets for Machine Learning
- Retrieved Sea Surface Temperature (SST) and Chlorophyll-a data from marine datasets and integrated them with catch data based on location, year, and month
- Developed a Linear Regression model to analyze and predict mackerel catch volume
- Developed a Random Forest model to classify mackerel catch levels into Low / Medium / High categories
- Applied K-Means Clustering to group areas and time periods based on marine environmental conditions and analyze their relationship with mackerel catch volume
- Evaluated model performance using RMSE, MAE, R^2 , Accuracy, and Silhouette Score according to the type of Machine Learning model
- Developed a Web Dashboard using PHP, HTML/CSS, and JavaScript to display data, analytical results, and Machine Learning predictions
- Integrated Python Machine Learning models with MySQL and PHP to deploy model results within the Web Application

Coffee Company Website – Business Management & ERP System (2025)

- Developed a Web-based Business Management and ERP System for managing business operations and users
- Developed Login, Authentication, and Authorization with role-based user access control
- Developed Purchasing and Sales Management modules, including PR, PO, Receiving, Payment, Quotation, SO, and Receipt
- Developed Inventory and Production Management modules for managing products, raw materials, and production processes
- Developed HR Management modules, including employee information, leave management, payroll, and attendance/time tracking
- Designed the system architecture and database structure and integrated the application with MySQL

Skill

- Python
- HTML
- C/C++
- JavaScript
- CSS
- MySQL

Language Skills

- Thai: Native
- English: Basic / Intermediate

Tools & Technologies

- Visual Studio Code
- GitHub
- Arduino
